

Thank you for downloading the free Planets Pack!

INSTALLATION INSTRUCTIONS:

To install the Planets Pack just unzip the file and move the unzipped folder to the "Models" folder inside your "VideoCopilot" folder that Element 3D created when you installed it.

If you didn't change the directory during the installation of Element 3D then this will be on your the local drive of your computer.

For example, on Windows 7 this is C:\Users\Owner\Documents\VideoCopilot\Models.

Once you have copied your Planets Pack folder to here then just open up After Effects and Element 3D and it will locate the EMF files and generate the previews and file structure automatically.

Enjoy!
